## The Anatomy and Histology of the Human Eye

---

By Abraham Metz

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Dimensions: 9.5in. x 7.3in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1868 Excerpt: . . . axis of all the sections. The sections do not quite reach the axis of the eye, but a cylindrical space is left centrally, without membranous structure, and which is considerably larger in the child than in the adult. The walls of the sections gradually become more delicate, until they can no longer be discerned. Hanover counted 180 radii in the human eye, and he believes that to be the sum of the sections composing the vitreous body. Finkbeiner claims that the section walls are the same in structure as the mcmbрана hyaloidea, having on each side a layer of pavement-cells. This division into sections, as taught by Hanover, and later, by Finkbeiner, is sustained by Pilz, Bowman, Heiberg, and others. Pilz says this cannot be an error, such as Briicke was led into, when he thought the vitreous body laminated, resulting, Pilz thinks, from the effect...
